Dear Mr. Weber,

I would like to share IWBF Europe position on the originally requested approval. Approval for usage of your new flooring system presented to Schweizer Paraplegiker-Zentrum.

Fair amount of time has been used for research and discussion with individuals regarding the new flooring system. Especially, the ones they have the necessary experience with this product.

Facts summary:

- We need to consider and respect that FIBA certification is not specifically made under perspective of the use for wheelchair basketball. Without previous experience we could not assess how usable the floor for wheelchair basketball is. However, the presented FIBA certification proves high quality standard of the product and capability of usage for running basketball.
- We had no experience and possibility to test the new flooring system in person. Under those circumstances we had to rely exclusively on the information received from ASB GlassFloor, Nicolas Hausammann and his teammates own practical experience.
- Based on the information that Swiss NOWB plan to submit Bid to host wheelchair basketball European Championship Division A. We face potentially problematic organizational point as for the championship two game courts are required. In this case could happen two different types of flooring in game sport halls. They need to be unified otherwise the Bid will not be accepted.

After receiving all the certificates delivered by the ASB GlassFloor representative and gathering the personal player experience.

IWBF Europe came to conclusion as follows:

Presented new (ASB GlassFloor) flooring system is in line with requirements to run wheelchair basketball game.

IWBF Europe see advantages in this new flooring system as:

- Very innovative technology with the advantage of having game court with only side lines for basketball game visible.
- Possibility to change broken floor panels without dismounting the whole floor.

With kindest regards,

Petr Tucek
